

SAP BPC 10.x Reporting Training

[CLICK HERE TO REQUEST OUR TRAINING AGENDA AND LEARN MORE](#)

The Bluetree training sessions are designed to enhance users learning experience by not only demonstrating how to use the software but also provide experience of how it has been used in real-life scenarios.

This course offers a comprehensive toolbox for building dynamic reports and input forms using the EPM Add-in for Excel.

Comprised of presentations, demonstrations, and hands-on workshops. Presentations explore key concepts and provide clear instructions, while live demonstrations and hands-on exercises allow users to immerse themselves in the software.

Applicable to both the Microsoft and NetWeaver platforms for BPC 10.x

AUCKLAND

May 29th – 30th
Level 27 Pwc Tower
188 Quay St
Auckland, 1010

Knowledgeable and confident users are essential to the success of an implementation, as well as the key to any organisation's ability to recognise significant value from their investment. The EPM Add-in for Excel interface provides users with powerful tools for creating dynamic reports and input forms; however, its potential can go unrealised if users do not have the skills to fully utilise it.

Bluetree's interactive two-day, BPC 10.x Reporting training provides users with a comprehensive toolbox for building dynamic reports and input forms in the EPM Add-in for Excel. Our training begins with basic reporting considerations and moves onto advanced reporting topics. Once equipped with the tools to efficiently use the EPM Add-in, users will be able to spend less time manipulating data and more time analysing it.

This packed course covers everything from key terminology to a detailed review of the Report Editor functionality. It then delves into more advanced topics such as adding powerful calculations to reports and input forms, using EPM Functions, the dynamic EPM Formatting Sheet, and much more.

Courseware comprises of presentations, demonstrations and hands-on workshops over two full days:

Presentations explore key concepts and provide clear instructions, while live demonstrations offer real world scenarios.

Our engaging **hands-on workshops** also allow students to experiment and build multiple reports and input forms in a real BPC environment to directly apply what they're learning. Supporting documentation and **course materials** have been compiled from years of proven field experience implementing and improving BPC solutions and is provided in soft copy to all attendees.

Attendees are typically BPC Administrators, Power Users or Reporting users; however, no prior experience with the EPM Add-in for Excel is required.

BPC 10.x Reporting Training is NZD 2,600 per person. Course materials and lunches are included in the price.
